Achievements

Online Railway Reservation System Application

Completed end to end case study of Online Railway Reservation System Application using Spring boot and React used for user interface. It is a double-role application project i.e. Admin and User, where Admin will have the main control over the system. Admin will be responsible for maintaining the system and also, keeping a check on the availability of trains, and updating any details related to the reservation system. On the other hand, Users can register themselves and can do online booking of trains.

Expense Tracker

Developed a front end application using React JS Library with Visual Studio Code. It helps user to track expenses.
Enhanced user interface using HTML, CSS
